## API Information

### 1. API Name

Tavily Search API

### 2. API Documentation URL

<https://docs.tavily.com/>

### 3. Mobile Application Description

My Android application will prompt the user to input a search query, then call the Tavily Search API to fetch relevant search results and display them to users. The application adopts a modern Clean Architecture pattern, including UI layer, business logic layer, and data layer, providing a smooth search experience. The application will also log each search for later operational analysis.

## 5. MongoDB Atlas Demo - Console Output

=== MongoDB Atlas Demo ===

Connected to MongoDB Atlas successfully!

Enter a string to store in the database: Hello MongoDB Task 1!  
String written to database successfully!

All strings stored in the database:

-----

1. Hello from Task 1 Demo
2. Hello MongoDB Task 1!

Total documents: 2

=== Demo Complete ===

---

## Summary

This document demonstrates the feasibility of using the Tavily Search API and MongoDB Atlas for Project 4 Task 2. Both demos successfully:

1. **Tavily Search API Demo:** Successfully fetched and displayed search results from Carnegie Mellon University query using the Tavily API with structured JSON data extraction.
2. **MongoDB Atlas Demo:** Successfully connected to MongoDB Atlas cloud database, wrote user input to the database, and read back all stored documents.

These demonstrations confirm that the selected technologies are viable for the planned distributed application.
